Abhilash Naidu Paspulati

Engineering Manager - Systems Engineering | Capital Projects | GMP Pharmaceutical & Regulated Manufacturing

Phone: 0469 031 341 | Email: abhilash333naidu@gmail.com | Address: 46 Beaver Street, St Albans, VIC 3021 | LinkedIn: https://www.linkedin.com/in/abhilashpaspulati/

Professional Summary

Accomplished Engineering Manager with 10 years of progressive experience delivering complex systems projects, capital programs, and technical leadership across high-assurance, regulated manufacturing environments. Proven expertise in systems engineering management, requirements development, design validation, risk management, and cross-functional team leadership. Skilled at translating strategic operational requirements into executable engineering solutions within GMP pharmaceutical, biologics, and regulated manufacturing sectors. Track record managing major technology transfer initiatives, coordinating 10+ cross-functional teams, and delivering programs at scale. Seeking to leverage systems thinking, disciplined engineering leadership, and safety-critical design experience to support Defence capability acquisition and sustainment.

Core Competencies

Engineering Management & Technical Governance: Systems engineering & requirements management | Team leadership & mentoring | Major program delivery & cross-functional coordination | Regulatory compliance (TGA, FDA, EU) | Design control & configuration management | Stakeholder & vendor engagement | Risk & hazard analysis | Engineering change control

Systems Integration & Technical Delivery: End-to-end systems integration | Equipment specification, validation (IQ/OQ) & commissioning | FAT/SAT execution | URS & design review | Design verification & traceability | Manufacturing & process engineering | Utility systems (HVAC, WFI, RO) | Technical documentation & batch records

Safety, Quality & Regulatory Assurance: WHS & machine safety standards | Regulatory compliance & audit readiness | Quality Assurance & CAPA processes | Risk-based engineering reviews & deviation management | Validation planning & lifecycle documentation | Budget forecasting & ROI analysis | Multi-disciplinary collaboration (QA, RA, Operations, Supply Chain)

Career Summary

MS&T Process Engineer (Technology Transfer Lead)	CSL Seqirus	Jul 2022 – Present
Project Engineer	Life-Space Group	Nov 2021 – Jul 2022
Technical Lead	Australian Pharmaceutical Manufacturers	Jul 2020 – Nov 2021
Technical Scientist	Australian Pharmaceutical Manufacturers	Sep 2018 – Jul 2020
Laser Technician	Glass Expansions	Jun 2017 – Aug 2018
Mechanical Draftsperson	SKF Australia Pty Ltd	Sep 2016 – Jun 2017
Design Engineer	Simplex CNC Systems	Feb 2016 – Aug 2016

Professional Experience

MS&T Process Engineer (Technology Transfer Lead) | CSL Seqirus | Jul 2022 – Present

- Lead technology transfer and systems integration for vaccine (flu cell culture) and antivenom (product of national significance) platforms, including facility infrastructure and technology upgrades
- Direct and coordinate cross-functional teams across engineering, quality, operations, automation, and regulatory functions to achieve validated manufacturing readiness and scalable operational capability
- Manage requirements traceability, design control, and validation alignment with TGA/FDA/EU regulatory frameworks
- Lead capital project planning, risk assessment, and design review coordination across multi-discipline engineering teams; oversee vendor qualification, FAT/SAT execution, and equipment commissioning
- Manage regulatory compliance through risk assessments, hazard analyses, deviation closure, validation planning, and design change control; ensure audit-ready technical documentation and lifecycle traceability
- Facilitate multi-site and global stakeholder collaboration on systems integration and process scale-up, ensuring scalable, compliant, and reproducible manufacturing implementation

Key Achievements

Capital Program Delivery: Contributed to $800M Project Banksia technology transfer initiatives, coordinating 10+ cross-functional teams from requirements through operational handover with full technical integrity and validation alignment

Engineering Leadership: Led multi-stream technical teams; mentored junior engineers in systems thinking, design control, and quality assurance

Regulatory Compliance & Technical Governance: Delivered GMP-compliant systems under TGA/FDA/EU frameworks; maintained audit-ready documentation and supported regulatory submissions

Vendor Management & Equipment Qualification: Executed vendor qualification, FAT/SAT, and equipment commissioning for critical manufacturing and packaging systems

Process & Documentation Excellence: Standardised design control, technical documentation, and risk-based engineering reviews; implemented change control and lifecycle documentation management

Operational Improvement: Optimized manufacturing design and process parameters, enhancing throughput, uptime, and cost efficiency

Cross-Site & Global Collaboration: Coordinated technology transfer and process scale-up across multiple sites, ensuring scalable, compliant, and reproducible implementation

Education

Master of Engineering (Manufacturing Engineering) — Feb 2015 – Dec 2016
RMIT University, Melbourne, Australia

Bachelor of Technology (Mechanical Engineering) — Jun 2010 – Jun 2014
JNTU University, Hyderabad, India
